Sathya Vamshi Mittakori

Data Engineer

Englewood, CO | sathyavamshi.ed@gmail.com | linkedin.com/in/vamshi-m-37711444a | github.com/vamshi-dev99

PROFESSIONAL SUMMARY

Data engineer with 5+ years building ETL pipelines, dimensional models and data quality checks in Python and SQL. Currently at the Colorado Department of Human Services; before that, four years at GoDaddy moving CRM, billing and support data into a SQL Server and PostgreSQL warehouse. Hands-on with Azure Data Factory, Databricks and Spark. Comfortable in the space between the business and the data, pinning down what a metric actually means before building the pipeline that feeds it.

CORE SKILLS

Languages: Python, pandas, PySpark, SQL, T-SQL, PostgreSQL

Data Engineering: ETL/ELT, Incremental loads, Dimensional modeling, Star schema, Data quality testing, Apache Spark, Source-to-target mapping, Data dictionary, Data lineage

Cloud and Warehouses: Azure Data Factory, Databricks, Azure Synapse, ADLS Gen2

Databases: SQL Server, PostgreSQL, MySQL

DevOps and Tools: Git, Azure DevOps (CI/CD), JIRA, Power BI, Tableau, Salesforce, Dynamics 365, Excel

Governance: PII masking, GDPR, FERPA

PROFESSIONAL EXPERIENCE

Colorado Department of Human Services Nov 2025, Present

Data Engineer Specialist *Denver, CO*

- Moved the Tier 2 RDMS dashboard refresh off manual Excel extracts onto scheduled Python and SQL jobs that pull from source systems, validate the data and load a SQL Server reporting layer.
- Wrote data quality checks (row counts, nulls, duplicate keys, sudden KPI swings) that run on every load and halt the refresh when something looks off, so bad data never reaches a published dashboard.
- Built source-to-target mappings for Tier 2 metrics with BITS, Community Partnerships and Disability Determination Services, covering source tables, business rules and targets, in a shared data dictionary.
- Built the Vendor Diversity dataset by joining state procurement contracts with vendor certification lists, standardizing and matching vendor names that were spelled several different ways across systems.
- Kept all SQL and Python in Git on Azure DevOps and wrote run notes for each job so anyone on the team can rerun or troubleshoot a failed load.

Cumberland University Oct 2024, Oct 2025

Data Analyst *Lebanon, TN*

- Pulled enrollment and program data with SQL and built Power BI and Excel reports that department heads used each term, handling all student records under FERPA.
- Set up a central ticketing system for student and faculty requests and reported on volume and turnaround time from its data.

GoDaddy Aug 2019, Jul 2023

Data Engineer (Contract) *Hyderabad, India*

- Built and ran daily Python and SQL ETL pipelines that pulled customer, billing and support data from Salesforce, Dynamics 365 and internal MySQL databases into a SQL Server and PostgreSQL warehouse.
- Designed the star schema behind 20+ Power BI and Tableau dashboards for finance, marketing and support, and moved the largest fact tables to incremental loads once full reloads outgrew the overnight window.
- Wrote MapReduce jobs on Hadoop to roll raw support and web activity logs into daily summary tables that analysts could query directly.

- Built the workforce data feed for a 280-agent support org, joining scheduling, ticket and productivity data into daily tables used for staffing and shift planning.
- Prepared feature tables for marketing A/B tests and customer segmentation models.
- Masked PII in reporting tables and documented data lineage for GDPR audits.

CERTIFICATIONS

- Microsoft Certified: Power BI Data Analyst Associate (2025)
- Accenture Data Analytics and Visualization

EDUCATION

M.S. Information Technology — Cumberland University

B.Sc. Computer Science — Loyola Academy
